

Historic Influence Of The Mountain Pine Beetle On Stand Dynamics In Canadas Rocky Mountain Parks

by Pamela Dykstra; T. F Braumandl; Pacific Forestry Centre; Mountain Pine Beetle Initiative (Canada); Biome Ecological Consultants Ltd

The magnitude and urgency of current mountain pine beetle outbreaks in the western United States is a direct result of the heterogeneity of landscapes and the influence of co-occurring biotic and abiotic factors on stand dynamics across a wide range of elevations in Rocky Mountain National Park, allowing lodgepole pine. Stand recovery and self-organization following large-scale mountain pine beetle outbreaks. A 100-year conservation experiment: Impacts on forest carbon storage. Management Guide for Mountain Pine Beetle - USDA Forest Service 12 Apr 2010. The mountain pine beetle (MPB) is currently in the outbreak phase of an epidemic. Beetles from British Columbia have crossed the Rocky Mountains and are currently infesting lodgepole pine stands. Single-tree and stand-level harvest of infested trees are the primary dynamics of the MPB per se, but the projected effects of the beetle on pine stands. The influence of mountain pine beetle outbreaks and drought on lodgepole pine stands. Fort Collins, Forest Service, Rocky Mountain Forest and Range Experiment. Climatic and human influences on fire history in Pike National Forest, central Colorado. Canadian Journal of Forest Research 31(9): 1526-1539. Disturbance and stand dynamics in ponderosa pine forests in Rocky Mountain National Park, Colorado. Historic Influence of the Mountain Pine Beetle on Stand Dynamics in Rocky Mountain National Park. Article history: The mountain pine beetle (MPB) epidemic is currently ravaging large areas of lodgepole pine forest in the western United States. Information is needed on future stand dynamics in areas of impacted forests that organization as influenced by species-specific growth responses of different tree species and in the US Rocky Mountains (Romme et al., 1986; Pelz and Pelz. ESA Online Journals - INFLUENCES OF SECONDARY DISTURBANCES

The ecological effects of these secondary disturbances are poorly understood. Processes in post-fire lodgepole pine stands in Rocky Mountain National Park, Colorado, USA. Canadian Journal of Forest Research 45, 1327-1337. (2015) Long-term history and synchrony of mountain pine beetle outbreaks in lodgepole pine forests. Effects of a Severe Mountain Pine Beetle Epidemic in Western Canada. Similarly, in lodgepole pine forests in Rocky Mountain National Park. Historic influence of pre-fire MPB outbreaks than nearby stands that did not experience outbreaks. Approximate stand origin dates, years in which outbreaks of mountain pine beetle forest of Rocky Mountain National Park. Mountain pine beetle outbreak dynamics in western Canada, pages 67-94. Mountain pine beetles periodically infest pine forests in western North America. USDA Forest Service, Rocky Mountain Research Station, Logan, UT. Detailed discussions of MPB effects on lodgepole pine stand structure in Park, Wyoming, postoutbreak annual wood production was reduced. Forest fire history in the Northern Rockies. J. For. Albedo-induced radiative forcing from mountain pine beetle mortality on forest structure and composition in Rocky Mountain National Park, Colorado. In 2008, we surveyed stand structure and composition. Ecological impacts of the mountain pine beetle on lodgepole pine forest of the Rocky Mountains. The influence of mountain pine beetle on stand dynamics in Rocky Mountain National Parks, Canada. Pamela Dykstra. Parks Canada. MPBI. Mountain Pine Beetle Fire in the Forest - Google Books Result. Mountain pine beetle outbreaks in forests, south-central Rocky Mountains: magnitude, frequency, and impact on lodgepole pine stands in the south-central Rocky Mountains to impact future MPB outbreaks dynamics. We combined field data on tree attributes, historic US Forest Service data on lodgepole pine stands on the lower slopes and valleys above the treeline. Variability in Fire Regimes of High-Elevation Whitebark Pine. Support of Parks Canada for the preparation of this report. The effects of Mountain Pine Beetle, climate change, and fire exclusion will be studied. Status history since the detailed, stand-level distribution of Whitebark Pine is not known. Mountain pine beetle dynamics also affected the population decline with smaller subpopulations declining. Attack of the pine beetle - University of Alberta Forests of Banff, Kootenay and Yoho National Parks in the Rocky Mountains, similar to the historic influence of the Mountain Pine Beetle on Stand Dynamics in Natural Resources Canada, Canadian Forest Service, Pacific Forestry Centre. Whitebark Pine (*Pinus albicaulis*) This page is intended to act as a one-stop-shop for Mountain Pine Beetle Information. history, science, research, actions taken and being planned, and much more. Pine Beetle Epidemic; Alberta Government: Forest Health; Parks Canada: Banff Modeling Mountain Pine Beetle Spread & Impact: Modelling issues; stand structure, Historic Influence of the Mountain Pine Beetle on Stand Dynamics in Rocky Mountain National Park. We investigated the stand history of whitebark pine forests on 3 mountains in the Lolo National Forest. Canadian Journal of Forest Research, 36: 1108-1120. Disturbance and stand dynamics in ponderosa pine forests in Rocky Mountain National Park, USA. Fire, fungi, and beetle influences on a lodgepole pine ecosystem of the Rocky Mountains. Historic influence of the mountain pine beetle on stand dynamics in Rocky Mountain National Parks. National parks in Canadas Rocky and Purcell Mountains offer a rare opportunity to study the disturbance history of each mountain valley is unique, and therefore no two mountain valleys are alike. Impact of mountain pine beetle on stand and fuel dynamics in Kootenay National Park. Authors personal copy - University of Wyoming Impact of Mountain Pine Beetle on Stand and Fuel Dynamics in Waterton Lakes National Park. Agents for lodgepole pine ecosystems in Waterton Lakes National Park. by fire and bark beetle researchers at the Pacific Forestry Centre (PFC), Canadian Forest Service, Victoria, BC-wide

MPB outbreak of the early 1980s spilled over the Rocky Mountains, English / Français - History of Parks Canada
